Space Energy

Specification

Dimension: 39 cm x 56 cm x 22.5 cm

Weight: 16 kg

Maximum coverage area: 90m²

No need for maintenance

Installation Guide

1. Allow it to face the whole space, placing it on the stand and/or the table that is at least 40cm in height.
2. If the device is more than 2 devices, do not let them face each other at a close distance.
3. The concrete wall or objects would not interfere with the effect of the space energy device.
4. When placing in the bedroom, let it face towards the bed.

The existence of the invisible

The substances discovered in the space-time is only 4%. In 1913, an astronomer, Fritz Zwicky stated that there are 96% of the dark energy and matter still unknown. This dark matter and energy are penetrating our body and the universe every moment; however, it has been scientifically disregarded because there was no way to prove its existence.

Clark Maxwell (1831-1879) first introduced the Maxwell's equations in order to solve all physical problems in acknowledging higher order 3-dimensional principles of the physical phenomena. There were 20 equations in the original Maxwell's equations illustrating the multidimensional spatial characteristics of vector and scalar displaying the potential of the spatial energy, but they have been edited to 4 equations by Oliver Heaviside (1850-1925).

As a result, scientific exploration of finding the origin of the energy through mathematics in the 19th century physics and the interest in the origin of current wavelengths in the 3rd dimension have diminished.

The higher energy in existant in the space can cohere to be visible in the 3D reality. George F. B. Rieman (1826-1866) and Jules H. Poincaré(1854-1912) also have addressed the multidimensional structure of the spae. Rieman introduced the concept of multidimensional space and the basic principle of the nature of 3-D space. He explained about other mystical forces like electromagnetic force and gravitation as combined 4th dimensional force. Furthermore, Poincaré mathmatically arranged the multidimention spatial structure causing Newton's theory of substance and other chaos. Due to this, he became a pioneer in the chaos theory, which introduced the nonlinear theroy beyond the theoretical limits of the linear equation.

Later, Einstein and Otto Stern confirmed that there is an energy that does not disappear at 0 degrees and named it as a zero point energy and named the electromagnetic field occurred from this as zero point field.

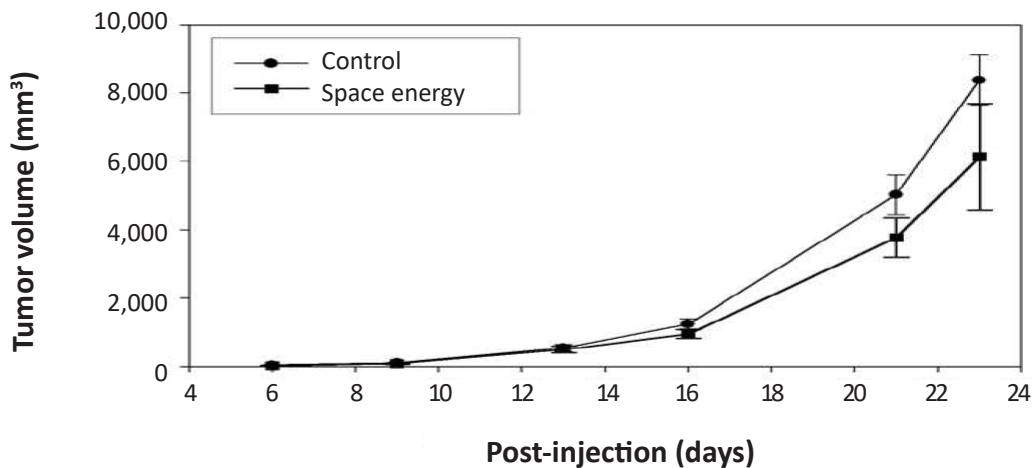

Scientifically proven

The effect of space energy

Space energy can have a positive influence on the living things as the microorganisms in the air change. Many scientists are developing this energy device in various ways to aid in vivo-activity.

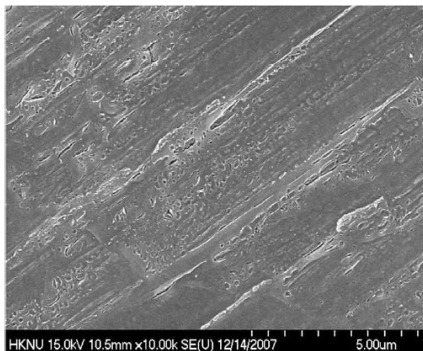

1

Exposure to the space energy can reduce the size of the tumor cells.

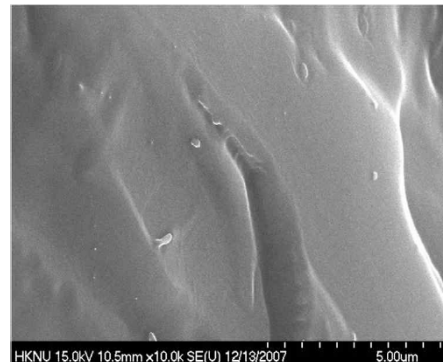

2

Exposure to the space energy can smooth the surface of the ice (water).

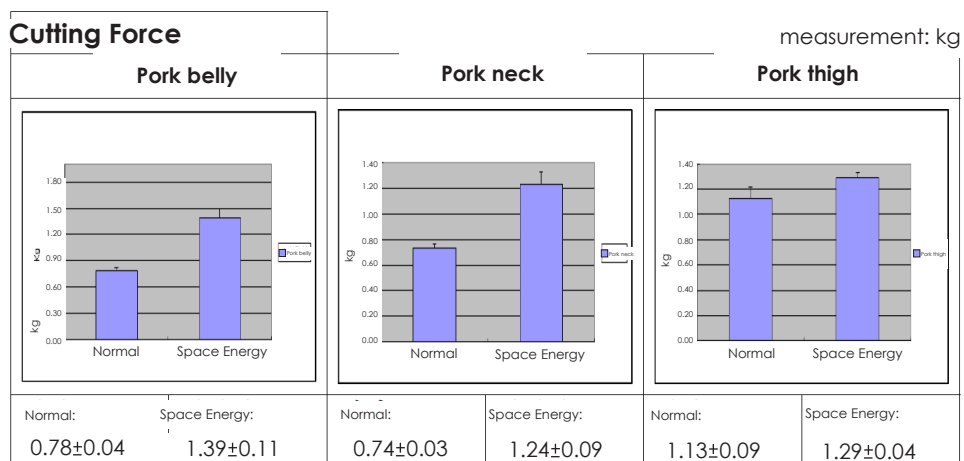

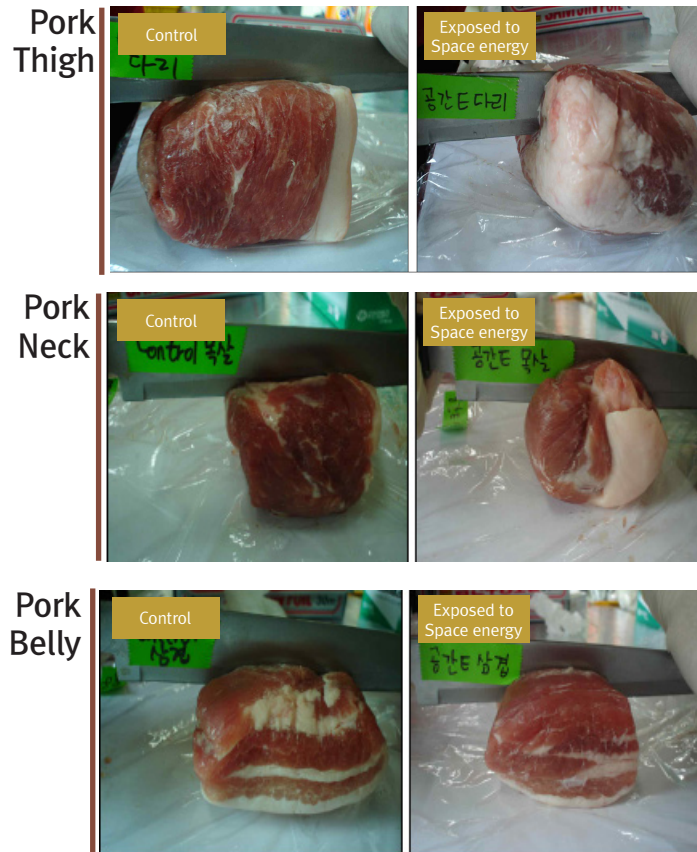

Distilled water ice surface

Space energy exposed distilled water ice surface

The ice surface of the distilled water exposed to the space energy is in the structure like a snow, it is perceived to be tiny frozen water particles have been gathered. Meanwhile, nonexposed distilled water's water particles are bigger, so the ice surface is very rough.

Exposure to the space energy can smooth the frozen meat to smoothly cut down through it.

The frozen meat exposed to the space energy required less cutting force to cut down through the meat. The intensity of the frozen state is not very strong means that the smaller water cluster have been frozen as if cutting through the broken ice particles.

4

Exposure to the space energy can longer preserve the fruit and plants

AFTER 12 DAYS - Indoor

Space Energy

Experiment Results:

- Lily exposed to the space energy for three days: The degree of the lily to wilt and decay slowed down
- Strawberry exposed to the space energy for twelve days: the duration of its freshness has increased
- Tofu: The dripping effect caused from the collapse of the surface of the protein has reduced after the exposure to the space energy

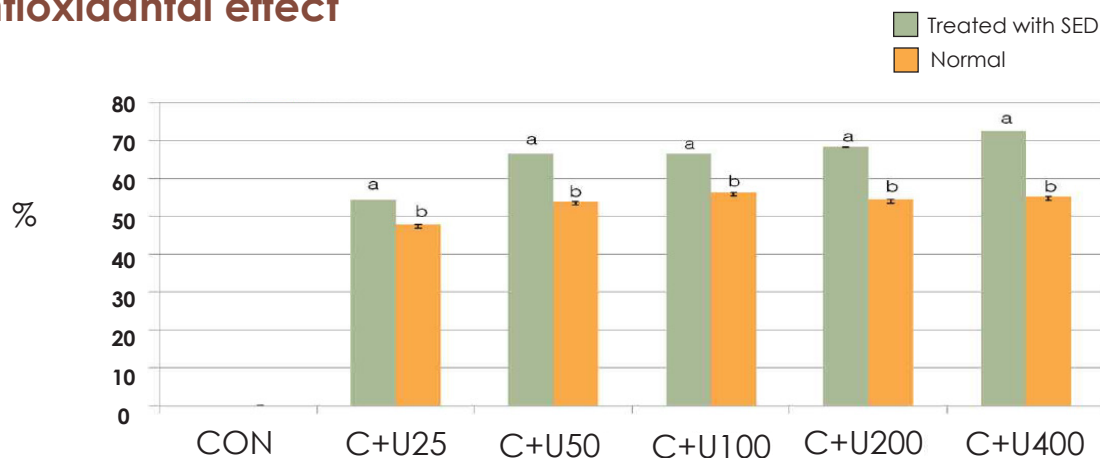

Exposure to the space energy can accelerate the seed germination.

Experiment Results:

- Seeds watered with the space energy exposed water: accelerated seed germination observed
- This is supposed to be due to space energy working to structurize the water in which then accelerated the bioactivity of the plants.

Exposure to the space energy has a higher level of antioxidantal effect

- Antioxidant measurement results using the energy exposure badge: In the distilled water exposed to space energy device (SED), 5~20% differences were observed. More antioxidant effect means better potential to maintain health and anti-aging.

Exposure to the space energy can revert the old engine oil back to its color and function

oil

Change in the old, discarded engine oil after exposing to the space energy - following changes were observed after the 3-day exposure to the SED:

Research conducted by Yonsei Wonju Medical University Professor Kim, H. W.

- Black-colored old engine oil turned more into its original color- brown
- SED treated old engine oil started to smell like an oil
- After dropping several drops of water into the engine oil, SED exposed engine oil started to mix in with the water. The old engine oil did not get mixed into the water
- Old engine oil did not ignite fire, but SED-treated-old engine oil were highly flammable.

Engine oil & faucet water mixture -
completely separated, the oil is floating above the water

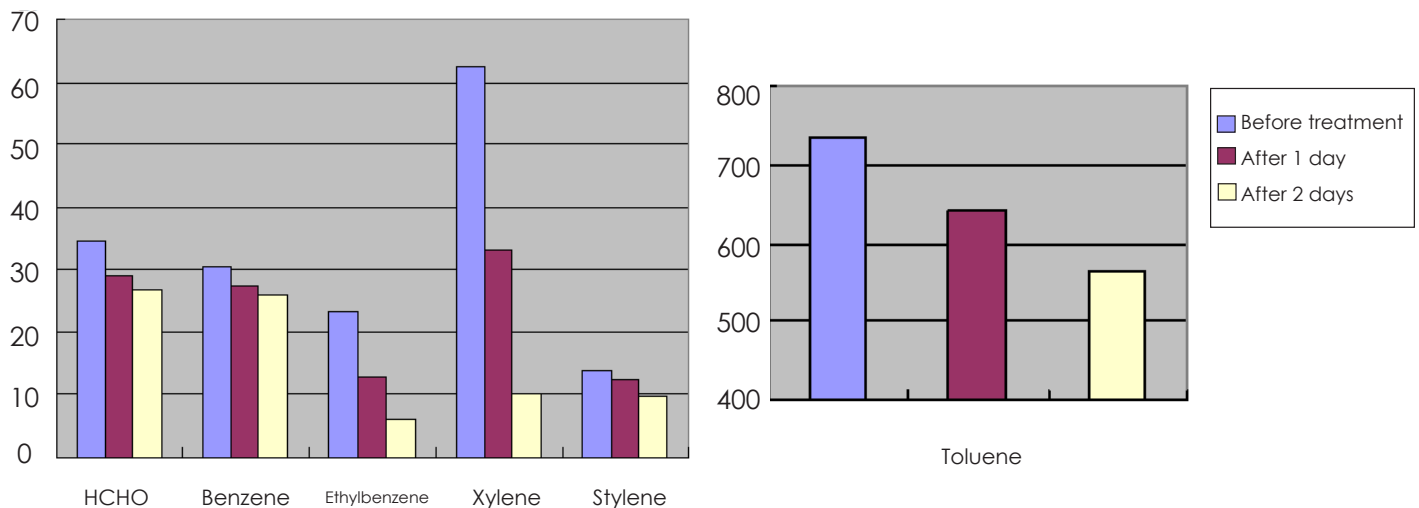

Engine oil & salt water (from a squid water tank) mixture -
Mixes better than the faucet water but the the particle mixtures are rough

Engine oil & SED-treated water mixture -
Gets well mixed in immediately after shaking it. The particles are smooth.

Exposure to the space energy decompose the flammable VOC

Criteria	Day 0	Day 1	Day 2	Acceptable level (µg/m³)
HCHO	34.7	28.9	23.6	25
Benzene	30.6	27.4	25.8	30
Toluene	732.1	642.0	564.8	1,000
Ethylbenzene	23.4	12.7	6.0	360
Xylene	62.3	33.3	10.3	700
Stylene	14.1	12.3	9.8	300

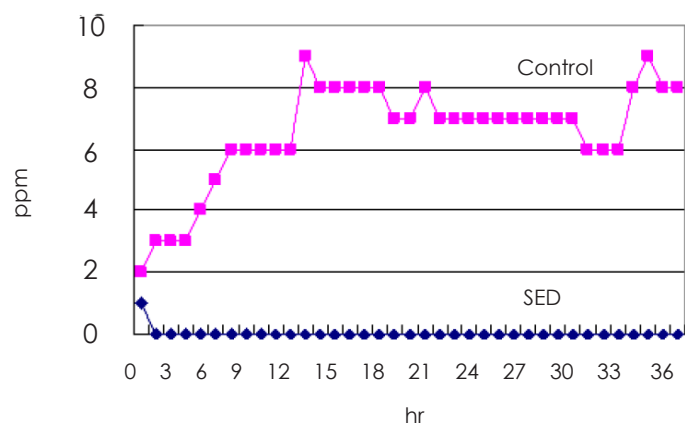

New House syndrome causing flammable volatile organic compounds (VOC) exposed to the space energy test results: after only two days, the VOC levels dropped below the acceptable level.

Exposure to the space energy reduces the ammonia level from the livestock manure

Result of the study on how space energy can decompose environmentally toxic components and odors:

- The ammonia level from the livestock manure had diminished after the exposure to the space energy
- its form changed from a decay state to a **fermentation state**

Importance of daily exposure to the space energy

Why should you have the space energy device at home?

In the space where we live in, there are numerous microorganisms and viruses. In addition, there are countless electromagnetic waves and magnetic fields.

The space energy device changes and harmonizes the surrounding energy so that our bodies may not get harmed by these unseen factors

Beyond the air pollution level and oxygen concentration, living microorganisms occupying the space in the forest and the city are different. This can be easily seen in the distinguishable fermentation level of the fermented food in the urban and rural areas.

In Mongol, if you place a pack of milk outside, it becomes a cheese. However, the same cannot be expected in the city.

Maintain the freshness of food longer

Turn the property of water to be healthier

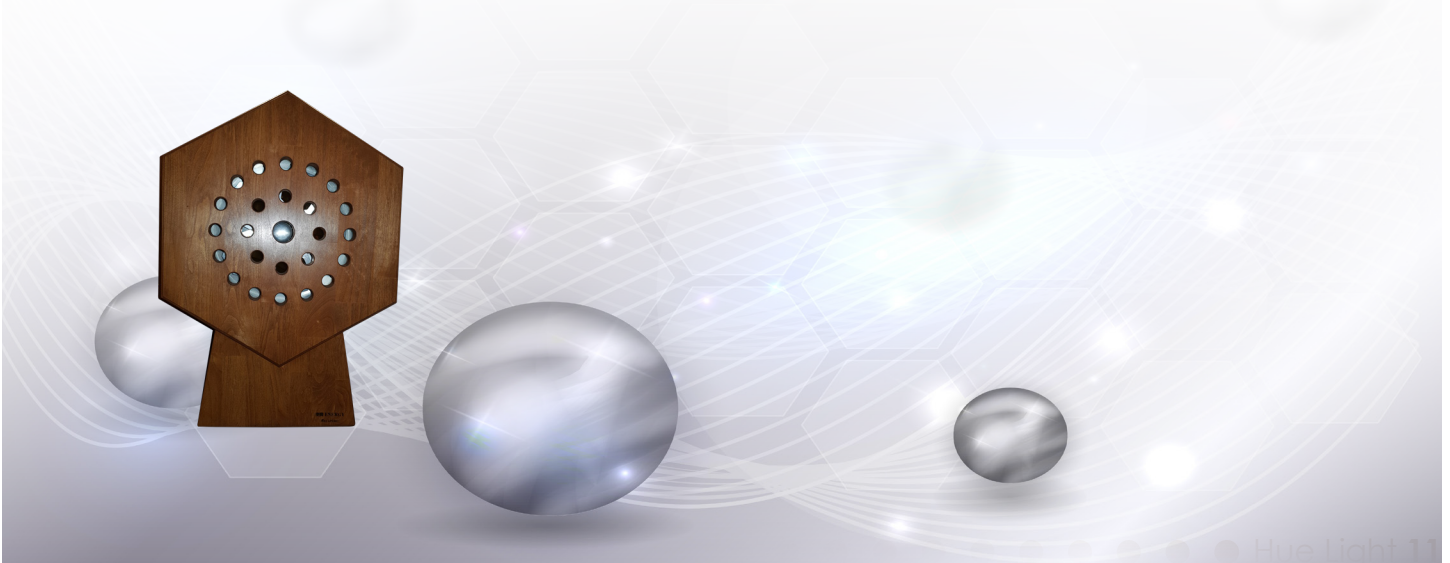

Accelerate the plant growth

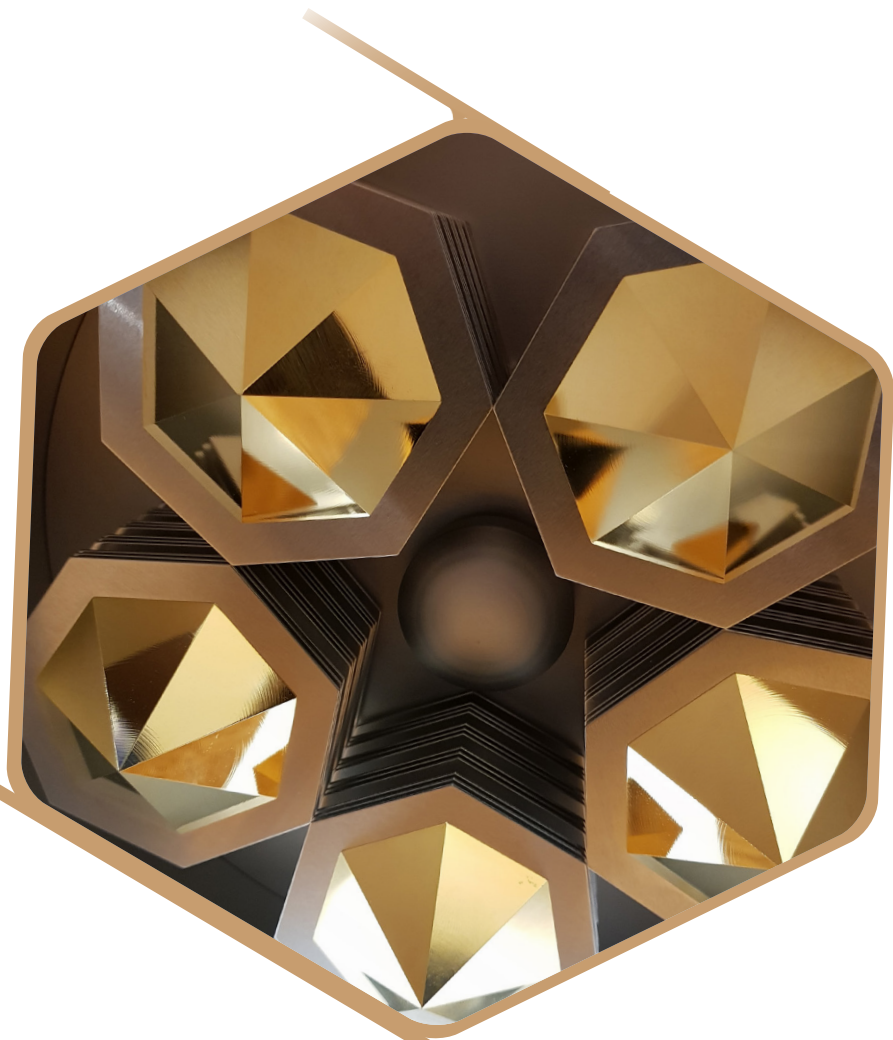

Prevent oxidation and promote fermentation

Lessen the occurrence of common cold
